

## New technologies in labels production

### 1. Deactivatable Spots Ribbon

It is with great pleasure to inform you that Tagit SA has purchased equipment for the production of Deactivatable Spots Ribbon. This allows the production of Deactivatable EM Labels without using slugs for the deactivation as we do in our basic Deactivatable Labels.

Tagit is the only supplier who can manufacture this unique material.

The benefits of MW with spot deactivation are obvious:

- Very thin deactivation material
- Cannot be felt because there are no slugs
- Almost invisible to see
- No additional adhesive to keep Slugs in place
- Thinner rolls
- Easier to print

### 2. Micro Wires

Furthermore, we can inform you that Tagit can now supply a Micro-Wire (MW). This Micro-Wire is only 60mmk, which is almost as thin as a hair. This wire can be supplied in all standard lengths and can be applied on all liners e.g. white, clear, bar code etc.

The benefits of the MW are:

- It is so thin that it is almost invisible
- Ideal for Non-Deactivation Source Tagging application
- Ideal solution for EM Pass-a-round installations
- Great detection in Meto Systems
- Ideal for use in the EM Price Labels

### 3. Cross-web

Tagit started to produce cross-web labels for Price Labels and source tagging

### 4. Benefits in combined technologies

Our clients can benefit from any combination of the above technologies like printable price label with MW and spot deactivation, hair thin ribbons for source tagging etc.
